U.S. Navy Marine Climatic Atlas of the World - Ver 1.1.

This CD-ROM includes analysis and display software for climatological averages of atmospheric and oceanographic data. The data are summarized with user-defined 1 and 5 degree grid areas covering the global marine environment. The summaries are produced using predominately ship data collected between 1854-1969. The major elements include air and sea temperature, dewpoint temperature, scalar wind speed, sea-level pressure, wave height, wind and ocean-current roses. This CD also allows the user to define element intervals (e.g. 5 to 10 knots, 2 degree temperature intervals). Contouring for explicitly user-defined regions and exporting data to a printer or diskette are supported. Narratives for Mediterranean ports and ocean basin climatology narratives are included in this version. . . . . \$175.00

U.S. Navy Marine Climatic Atlas of the World . . . . . \$ \_\_\_\_\_\*

CAUTION: MANY ISOPLETHS OF THESE ATLASES ARE IN COLOR, AND ARE DIFFICULT TO DISTINGUISH ON MONOCHROME.
