NOAA Climate Science & Services
Monthly Climate Update

A look back at October and the Year-to-Date

A preview of December-February

Jake Crouch
Climate Scientist
NOAA’s National Climatic Data Center

Deke Arndt
Chief, Climate Monitoring Branch
NOAA’s National Climatic Data Center

David Unger
Seasonal Forecaster
NOAA’s Climate Prediction Center
Contiguous U.S: 57.1°F, 3.0°F above 20th century average
4th warmest October on record, warmest since 1963

Statewide Temperature Ranks, October 2014
Period: 1895-2014 (120 years)

- Above-average across much of the country
  - 15 states had a top 10 warm October across the West, Southern Plains, and Northeast.

- West Coast locations were record warm
  - Seattle, WA
  - Portland, OR
  - Monterey, CA
U.S. October 2014 Precipitation

Contiguous U.S.: 2.33 inches, 0.17 inches above 20th century average
Ranked near median value in 120-year record; masked regional extremes

Statewide Precipitation Ranks, October 2014
Period: 1895-2014 (120 years)

- Wet in the Northwest, Midwest, Northeast.
  - KY, MO, and TN were top 10 wet.

- Dry in the Northern Plains/Rockies and Great Basin.
  - NV and UT had their 5th wettest October.
  - Remnants of Hurricane Simon boosted precipitation for the Southwest.

- Snow cover extent slightly below average.
• **Contiguous U.S.** 55.4°F; 0.5°F above 20th century avg; Top 40 warm year-to-date

• Coldest year-to-date since 2009 for CONUS, with a warm West and cold East.

• California: 63.8°F, +4.2°F above 20th century average, +1.6°F above the previous record warm Jan-Oct. It is virtually certain CA will have its warmest year.
Current U.S. Drought

29.5% of Contiguous U.S. in Drought
(↓ 1% since beginning of October)

- **Improvement**: Parts of the Central and Southern Plains, Northeast, and Hawaii
- **Degradation**: Upper Midwest and Southeast
- **Status quo**: The West and parts of the Southern Plains

November 18, 2014
(Released Thursday, Nov. 20, 2014)
Valid 7 a.m. EST

Drought Impact Types:
- Delineates dominant impacts
- S = Short-Term, typically less than 6 months (e.g., agriculture, grasslands)
- L = Long-Term, typically greater than 6 months (e.g., hydrology, ecology)

Intensity:
- D0 Abnormally Dry
- D1 Moderate Drought
- D2 Severe Drought
- D3 Extreme Drought
- D4 Exceptional Drought

Global Temperature: October 2014

- October +1.33°F warmer than 20th century average
  - Warmest Oct on record
- Land: +1.89°F (5th warmest)
- Ocean: +1.12°F (warmest)
  - 6th consecutive month (starting in May) with record warm oceans

The global temperature record dates to 1880 (135 years)
Global Temperature: Year-to-Date 2014

- Global temperature +1.22°F warmer than 20th century average:
  - warmest Jan-Oct on record
- Land: +1.75°F (tied, 4th warmest)
- Ocean: +1.03°F (warmest)

The global temperature record dates to 1880 (135 years)
Recent Global-Scale Warmth: Driven by Ocean Temperatures

Warmest Months on record: Ocean Temperature

Global Climate: End of Year Scenarios

November 2014 | Monthly Climate Webinar
Sea Surface Temperatures and ENSO

- Sea surface temperatures
  - Above normal SSTs across the equatorial Pacific
  - Above normal SSTs along the west coast of North America

- ENSO forecast
  - 58% chance of El Nino
  - Anomalies between +0.5 C and +1.0 C, favors a weak El Nino
Monthly Forecast (December)

December Average Temperature Probability

December Total Precipitation Probability
Seasonal Forecast (Dec-Jan-Feb)

Dec-Jan-Feb Average Temperature Probability

Dec-Jan-Feb Total Precipitation Probability
U.S. Drought Outlook
Drought Tendency During the Valid Period
Nov. 20, 2014 – Feb. 28, 2015; Released Nov. 20, 2014

KEY:
- Drought persists or intensifies
- Drought remains but improves
- Drought removal likely
- Drought development likely

Author: Rich Tinker, Climate Prediction Center, NOAA

Depicts large-scale trends based on subjectively derived probabilities guided by short- and long-range statistical and dynamical forecasts. Short-term events -- such as individual storms -- cannot be accurately forecast more than a few days in advance. Use caution for applications -- such as crops -- that can be affected by such events. "Ongoing" drought areas are approximated from the Drought Monitor (D1 to D4 intensity).

For weekly drought updates, see the latest U.S. Drought Monitor.

NOTE: The tan area areas imply at least a 1-category improvement in the Drought Monitor intensity levels by the end of the period although drought will remain. The Green areas imply drought removal by the end of the period (D0 or none).
